Robotic “hands-on” Workshop

For the fourth time SWISS HERNIA DAYS will provide a “hands-on” robotic hernia repair workshop during the congress. The workshop is focusing on junior surgeons who are keen to learn more about the robotic platform with hand-on exercises. The workshop contains instructions to the robotic consoles, video instruction of the exercises, robotic surgery on a VR simulator and finally robotic exercises on the platform using a hernia model. The workshop takes 45 minutes and will be conducted during the congress.

Registration to the “hands-on” Workshop is only possible together with a congress registration and has a limited number of participants. The workshop can be booked during the online registration (which will follow soon).
